

The Green Solution

Every Cup Counts

Our Green Commitment

Cafection strives to make the planet a better world for future generations. One way to do so is to offer environmentally responsible equipment. For example, our single cup coffee machines generate 100 % biodegradable by-products.

Our ecological footprint is made smaller with a sustainable refurbishing program that is environmentally conscious and that will serve another 200,000 cups.

Making Responsible Choices

For Cafection, being greener implies decreasing negative environmental impacts whenever we can. That is why we create equipment using whole bean or ground coffee instead of plastic cups. This way, we eliminate by-product wastes. Moreover, by using only fresh products, our equipment guarantees the best coffee experience.

An Environmentally Friendly & Sustainable Brewer

- Less waste created
- No plastic discs used in the brewers
- Compostable organic wastes
- Biodegradable by-products
- Long life machines and refurbishing possibilities
- No excess packaging
- Documents printed on recycled paper

New Management Tool PRO now available!
